Allowable Subject Matter

Claims 1-7, 9, 10 and 12-14 are allowed.

The following is an examiner's statement of reasons for allowance:

With regards to claim 1, the prior art does not suggest or render obvious a method of logging a geological formation comprising without, counting or detecting individual pulses stimulated by a burst from a low burst rate neutron generator, detecting gamma or neutron radiation while generating a current output indicative of said radiation and integrating the said current output of the radiation detector further generating an analogue waveform that is characteristic of the rate of decay, hence neutron capture rate, in combination with the rest of the claim limitations. Although, references like Smith (US patent 4,122,338) teaches a method of logging a geological formation, Smith counts pulses thus silent with regards to applicants' method. As such, applicant's disclosure provides a novel and nonobvious improvement over the prior art. Claims 2-7, 9, 10 and 12-14 are also allowable by virtue of their dependency on claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
